Micronutrients

Omega-3:

Play a crucial role in brain function, as well as normal growth and development. They also reduce the risk of heart disease by lowering triglyceride levels, also curbs joint pain, and helps with rheumatoid arthritis.

- Rockfish has more Omega-3 than other white fish, Yellowfin tuna, shrimp or King crab
- Rockfish has 6x more Omega-3 than Tilapia, and 10x more Omega-3 than chicken

Selenium:

Prevents coronary heart disease, helps fight inflammation, increases blood flow, reduces free radical oxidative stress, and helps with antioxidant activity

- Rockfish has more selenium than most other animal proteins

Vitamin D+E:

Vitamin D and E are important for bone development, a strong immune system and brain function. Eating foods rich in Vitamin D and E can help prevent dementia and improve cognitive performance.

- Rockfish (as most whitefish) is an excellent source of Vitamin D and E, and compare very favorably to land-based animals
