Building the Foundation

As the recovery process continues, Pacific Seafood supports the work and actively partners with fisheries governance to rebuild the category; utilizing best practices in managing the fishing, landing and processing of wild caught resources. We are proud of our contributions towards rebuilding this category and supporting the fishing communities we depend on. Through effective management, sustainable practices, and fishermen cooperation, this fishery has evolved from being overfished to one that has received MSC certification and been identified as the poster child of good fishery management practices. A true success story!
