

SeaPro[®] HP

Deboned Fish Protein

SeaPro[®] HP is a deboned, low-ash, high-protein fish product derived from fresh cuttings of Pacific whiting (*Merluccius productus*) harvested and processed for human consumption. All processing is domestic, and shore based. All facilities are federally inspected. Commercial fisheries targeting Pacific whiting and other groundfish species on the West Coast of the United States conform to [Marine Stewardship Council](#) standards and reflect our “Sustainability Mission” to promote socially and ecologically responsible marine resource management practices worldwide. Utilizing only fish cuttings from established marine fisheries managed as sustainable natural resources is the best way to ensure our product is wholesome, renewable, and consistently available.

SeaPro[®] HP is a unique, consistent feed ingredient. Product specifications do not vary seasonally, and each production lot is formulated and blended to standard nutrient levels. Our ingredient is a concentrated source of highly digestible intact fish protein, extremely low in ash, and provides a supplemental level of omega-3 docosahexaenoic (DHA) and eicosapentaenoic (EPA) fatty acids. It is stabilized with natural antioxidants. This premium product has application for improving feed protein quality, and validating flavor, label and natural claims.

SeaPro[®] HP is an ideal protein source for supporting certain microbial growth in fermentation processing. Fish cuttings are extensively deboned and finely screened to reduce particle size and improve process incorporation. Most important, all protein is in its natural, complex structure (no hydrolysis) allowing for slow release of nitrogen and control of reaction rate and heat.

SeaPro[®] HP is a product of the United States of America. It is traceable with documentation showing source and processing of raw material utilized in production and final product formulation. Our company benefits from vertical integration within a human seafood company, [Pacific Seafood Group](#), through access to its electronic tracking of fish catch, landings and processing, and the subsequent disposition of fresh cuttings. Pacific Seafood Group maintains strict quality standards based on scientifically derived FSMA/HACCP systems at all our locations to ensure that the product you receive is the highest quality.

Customers are always welcome to visit our facilities and review our practices. Our definition of excellence, “*consistently doing your best and always striving to do better*”, demonstrates our commitment to providing a traceable, sustainable, and wholesome product to our customers and yours.

Stability	9 months when appropriately stored

Packaging	1,500-lb or 1,800-lb bulk bags; 25-lb clay coated paper bags
AAFCO Ingredient Name	Deboned Fish Protein
Certification	Canada Export

Directions for Use

For further manufacturing into the complete feed of animals as a source of protein.

Processing Statements

This product contains fish and is processed in a facility that processes crustacean shellfish.

Typical Values

The value for mixed tocopherols is a typical dosage rate, and residual value may differ at the time of shipping.

The value for peroxide is a typical value for the product at the time of shipping.

The values for freshness, amino acids, fatty acids, minerals, vitamins, aerobic plate count, and product characteristics are typical and expected.
